

It is safe to travel on commercial Airlines! In fact, based on this incredible safety record, if you did fly every day of your life, probability indicates that it would take you nineteen thousand years before you would succumb to a fatal accident. Nineteen thousand years!

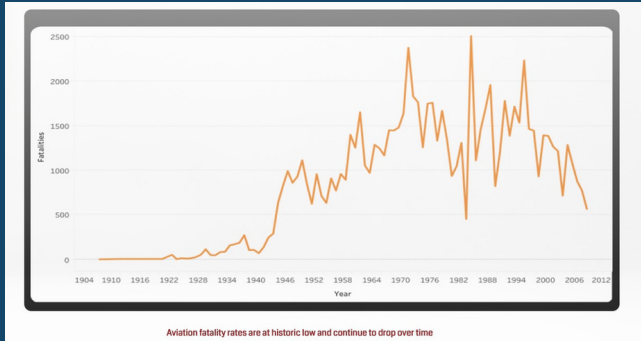

33% and 40% of all people experience some form of anxiety when it comes to flying.

Chance of dying in airplane is 1 in 3.37 billion

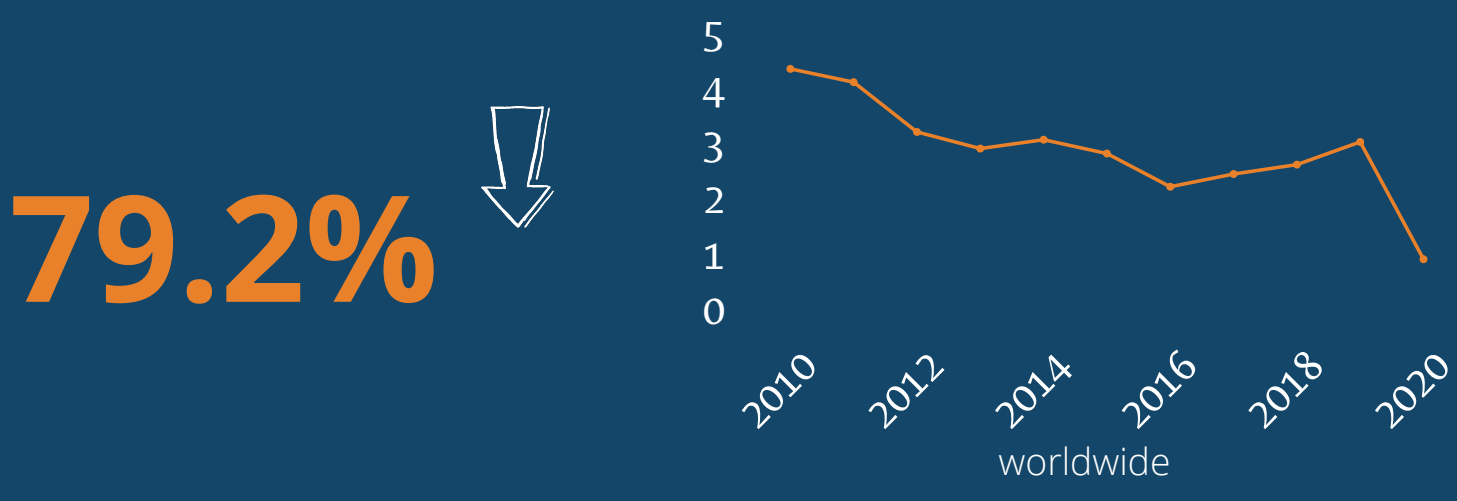

There are many more planes in the sky now and many more people involved, for one crash there are many more that don't crash.

98.6% of crashes do not result in a fatality.

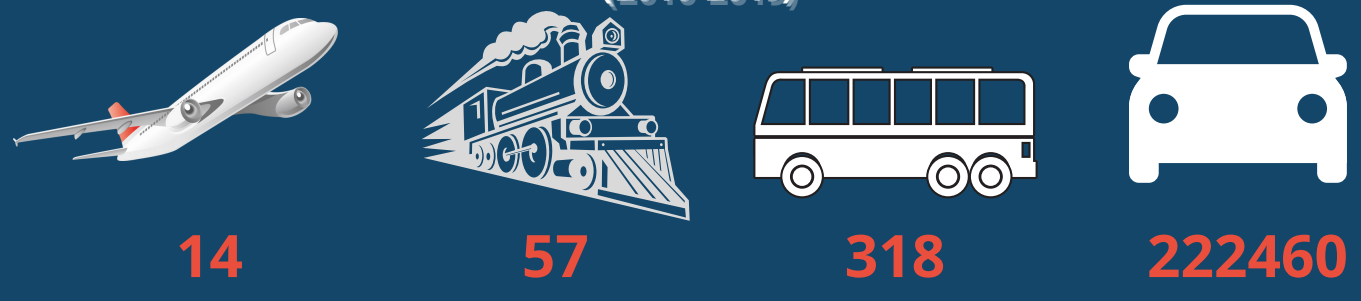

The odds of fatalities have been dropping steadily over the years.

World Aviation accident rates last 10 years

Deaths in the US by mode of transport (2010-2019)

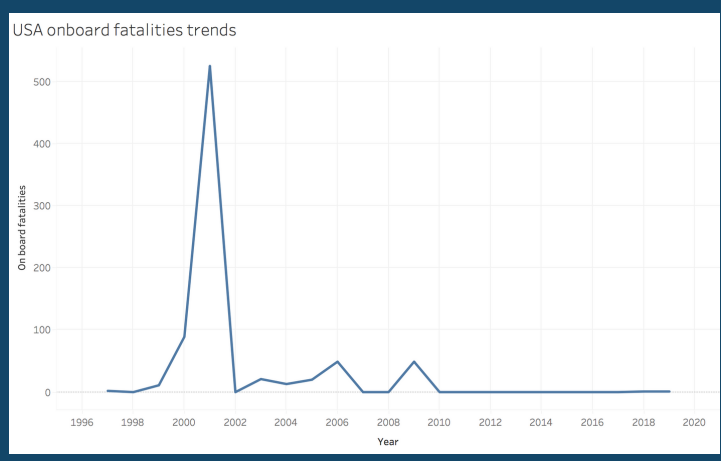

For every 1 airline fatality there are 15890 motor vehicle fatalities in USA

In absolute numbers, motor vehicles are more dangerous!

No commercial airline in the U.S. has had a fatal crash since 2009
